01

Chapter one

About this guide

Why this guide was prepared, which products it covers and who is responsible for it.

1 Introduction

This guide reflects the commitment of the Directorate General for Standards and Metrology to strengthening consumer protection, raising awareness of the safety and quality requirements for gas appliances and their accessories, and helping consumers make sound purchasing decisions based on clear and reliable information.

Appliances that run on liquefied petroleum gas (LPG), such as cookers, water heaters and space heaters, together with accessories such as gas cylinders, valves, regulators and hoses, need particular care when they are chosen, installed, used and maintained, because of the risks that can arise if they do not meet safety requirements or are used incorrectly.

This guide explains the key conformity requirements, product labels and certificates of conformity, and how to check that products are safe and conforming, with practical advice to help consumers recognise conforming products before and after buying them.

2 Scope of the guide

This guide aims to inform consumers in the Sultanate of Oman about the essential requirements for choosing and buying appliances that run on liquefied petroleum gas (LPG) and their accessories, and for checking their conformity with the approved technical regulation. It covers the following products; tap any category for details:

Rigid gas cylinders and tanks

Composite (fibreglass) cylinders

Accessories for gas appliances

Domestic cooking appliances

Commercial cooking appliances

Heating appliances

Water heaters

This guide is an awareness document for consumers. It does not replace the technical regulation, the standards or the related national legislation.

3 Custodian of the guide

Directorate General for Standards and Metrology

Ministry of Commerce, Industry and Investment Promotion · Sultanate of Oman

The Directorate oversees, reviews and updates the content of the guide in coordination with the competent authorities, to keep it consistent with the approved legislation, technical regulations and standards.

4 Version and updates

Item	Details
Guide name	Consumer Guide to Gas Appliances and Their Accessories
Version	1.0
Issue date	To be set upon approval
Responsible body	Directorate General for Standards and Metrology
Review cycle	As needed, or when legislative or technical updates are issued
Document status	Awareness guide

05

Question 5

General definitions

For the purposes of this guide, the following terms have the meanings given next to each. Search for any term:

Liquefied petroleum gas (LPG)

A mixture of petroleum gases, such as propane and butane, used as fuel for cooking, heating and water heating.

Appliance

Any appliance designed to operate on liquefied petroleum gas, such as cookers, heaters and water heaters.

Accessories

Equipment and devices used with gas appliances, such as valves, regulators, hoses and safety devices.

Gas cylinder

A container designed for filling and storing liquefied petroleum gas under pressure.

Cylinder valve

A device fitted to the cylinder to open and close the gas outlet.

Gas regulator

A device that controls the pressure and flow of gas from the cylinder to the appliance.

Certificate of conformity

A document issued by a notified conformity assessment body proving that the product meets the specified technical requirements.

Gulf Conformity Mark

A mark showing that the product meets the requirements of the relevant Gulf technical regulations.

Product label

The data and information shown on the product, its packaging or the accompanying documents to identify it and its use and safety requirements.

Quick Response code (QR Code)

A code that can be read with a smartphone to reach electronic information about the product or to trace its conformity.

Economic operator

The manufacturer, authorised representative, importer or distributor responsible for the product under the technical regulation.

Conformity assessment

The procedures used to verify that the product meets the specified technical requirements.

Flame supervision devices (FSD)

Safety devices that detect the flame and shut off the gas supply when it goes out, according to the appliance’s design and technical requirements.

02

Chapter two · Question 6

What should you consider before buying?

Choosing the right appliance is an important step for your safety and your family's. Your decision should not rest on price or appearance alone, but on technical and practical factors.

First: study your needs and means carefully

Purpose of use

Decide what it is for: cooking, heating, water heating or something else.

Place of use

Indoors or outdoors, with adequate ventilation according to the manufacturer's instructions.

Gas type

Check that the appliance is designed for the gas you have: propane, butane or a mixture.

Gas pressure

The appliance pressure must match your gas supply and the regulator used.

Capacity and output

Choose what meets your needs without oversizing.

Dimensions and space

Check that the appliance fits the space where it will be installed.

Running and maintenance

Gas consumption, maintenance costs and spare parts.

Safety requirements

Protection and safety features suited to the type of appliance.

Second: compare the appliances that suit your needs

Once you know your needs, compare the products on the market using these criteria:

Remember: The cheapest product is not necessarily the best choice; safety and technical conformity should be among your top criteria when buying.

- A valid certificate of conformity for the product under the applicable technical requirements.
- The Gulf Conformity Mark, where required.
- A clear, legible product label.
- Operating, installation and maintenance instructions in Arabic, or in Arabic and English.
- Appropriate safety devices and equipment.
- Clear details of the manufacturer and importer and how to contact them.
- Warranty, after-sales service and spare parts.
- A price that matches the product’s quality and technical specifications.

03

Chapter three

Certificate of conformity and product label

The two documents that tell you a lot about a product before you pay.

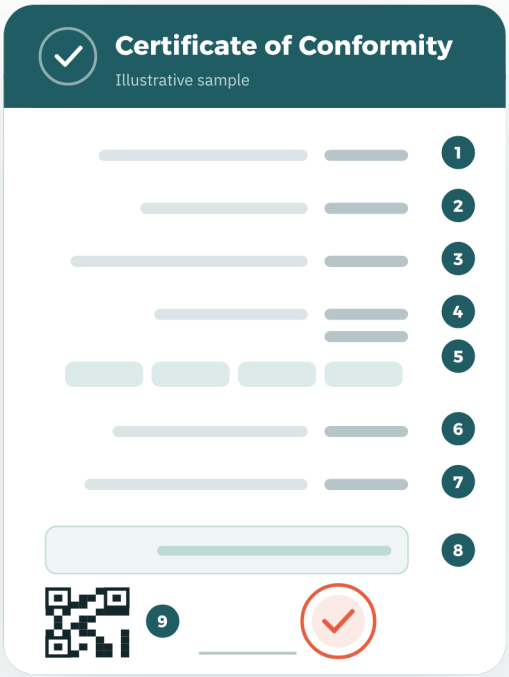

7 What is a certificate of conformity?

An official document issued by a notified conformity assessment body after the necessary evaluation and testing against the relevant technical requirements and standards. It confirms that the product has gone through the specified conformity assessment procedures and meets the technical requirements that apply to it.

- It provides documented proof that the product went through conformity assessment.
- It helps confirm that the product meets safety requirements.
- It builds consumer confidence in products on the market.
- It helps market surveillance authorities verify product conformity.
- It limits the circulation of non-conforming products that may endanger consumers, property or the environment.

8 How do I recognise a certificate of conformity?

Tap any item to see where it appears on the sample certificate:

1. Manufacturer’s name and address.
2. Importer’s name, where applicable.
3. Product name, category and model.
4. Product identification number or serial number.
5. The standards and technical regulations the product was assessed against.
6. Name of the notified body that issued the certificate.
7. Certificate number, issue date and validity period, if any.
8. Scope of the certificate and the products it covers.
9. Traceability code or QR code, where required.

Make sure the certificate details **match the actual product**, and do not settle for a certificate for a product with a similar trade name.

9 Can I see the certificate of conformity before I buy?

Yes

You can ask the seller or supplier to show you the certificate of conformity before buying, and you have the right to ask whether the appliance or accessory conforms to the technical regulation and the relevant standards.

Consumer tip: Do not rely on the words “approved” or “meets the standards” in an advertisement alone; ask for proof of conformity.

It is advisable to:

1. Ask for a copy of the certificate of conformity or its key details.
2. Check that the certificate covers the exact model you want to buy.
3. Make sure it was issued by a notified conformity assessment body.
4. Check the certificate’s status and validity through the official channels available.
5. Make sure it covers the product and accessories concerned, not a different product.

10 What is a product label?

A set of data and information the manufacturer must provide on the product, its packaging or the accompanying documents, so that consumers know the product, its characteristics, its origin and how to use it safely. It helps you identify the product and its model, the manufacturer and importer, the country of origin, the right gas type and operating pressure, the warnings and safety requirements, and trace the product when needed.

11 How do I read a product label, and what must it contain?

Hover over or tap any item on the sample label to see its explanation in the table:

Domestic gas cooker · 4 burners Illustrative sample

Model **GC-460**	Serial number **SN 000000**
Manufacturer **Manufacturer name**	Manufacturer’s address **Address and contacts**
Importer **Name and address**	Country of manufacture **.....**

Gas type
LPG

Operating pressure
Per model

Warning: Install and use in a well-ventilated place according to the manufacturer’s instructions.

Conformity mark and traceability code

The data must be clear and legible **in Arabic**; another language may be added, and it must be fixed so that it cannot easily be removed or fade during the product’s expected lifetime.

Item	What you should know
Product name	The type of appliance or accessory and its function.
Model	Model number or product reference number.
Serial number	A number or code that allows the product to be traced.
Manufacturer’s name	The manufacturer’s company name or trademark.
Manufacturer’s address	The manufacturer’s address and contact details.
Importer	The importer’s name and address within the member states, where applicable.
Country of manufacture	The country where the product was made.
Gas type	The gas type the product is designed to operate on.
Operating pressure	The gas pressure specified for operating the appliance, depending on the product.
Warnings	The warnings and instructions needed for safe use.

Conformity mark	The Gulf Conformity Mark and traceability code, where applicable.

12 Must every new product carry a label?

Yes

The required label data must be provided for new products covered by the technical regulation, according to the nature of the product and the annex on marking requirements. The information must be correct, clear and not misleading to consumers.

When the product is small

If the size or nature of the product does not allow all the data to be shown on it, some may be placed on the packaging or in an accompanying leaflet, with a clear note that more information is in the accompanying documents.

Do not buy a new product that lacks essential data, or whose manufacturer, origin or safe-use requirements cannot be identified.

04

Chapter four · Questions 13 to 19

Products covered by certificates of conformity

Choose a category to see its types and the reference standards.

13 Rigid gas cylinders and tanks

Transportable refillable welded steel cylinders

Designed to be filled with LPG and reused, in line with design and manufacturing requirements.

GSO ISO 22991

Non-refillable metallic gas cartridges

Small metal cartridges for portable appliances, from 50 to 1000 ml according to the list.

GSO EN 417

Static welded steel cylindrical tanks

Designed to store LPG, with capacities up to 13 cubic metres.

GSO EN 12542

LPG tanks up to 13 cubic metres

Subject to inspection and requalification requirements to confirm they remain fit for use.

GSO EN 12817

14 Composite gas cylinders

Cylinders made of fibre-reinforced materials such as glass fibre, with a construction that differs from traditional steel cylinders.

Hoop-wrapped composite cylinders and tubes (Hoop Wrapped)

Fibre-reinforced, with capacities up to 450 litres.

GSO ISO 11119-1

Fully wrapped with load-sharing metal liners

Contain metal liners that share the mechanical load, reinforced with fibres.

GSO ISO 11119-2

Fully wrapped with non-load-sharing liners or without liners

Fibre-reinforced cylinders and tubes, with capacities up to 450 litres.

GSO ISO 11119-3

Important: A different material or weight does not necessarily make one type safer than the other; what matters is that the cylinder conforms to the approved technical standards and suits its intended use.

15 Accessories for gas appliances

Components that play a key role in regulating and controlling gas flow and ensuring safe use.

LPG cylinder valves

Open and close the gas outlet of the cylinder.

GSO ISO 14245 GSO ISO 15995

Gas pressure regulators

Control the pressure and flow of gas from the cylinder to the appliance.

GSO EN 16129

Rubber hoses for domestic appliances

Carry gas from the supply to the appliance and must be suitable for the gas type and operating pressure.

GSO 141

Gas leak alarm and shut-off systems

Detect a gas leak and sound an alarm, shutting off the supply according to the system design.

GSO 1611

16 Domestic gas cooking appliances

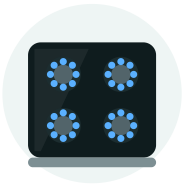

Conventional domestic cooking appliances

Domestic cookers and ovens that run on LPG.

Appliances with forced-convection ovens or grills

Have systems that circulate hot air inside the oven or grill.

Appliances with glass or ceramic hobs

Have one or more glass or ceramic panels.

Appliances with automatic burner controls

Have one or more burners with an automatic control system.

Reference standards for this category include

SASO 168 | EN 30-1-1 | EN 30-1-2 | EN 30-1-3 | EN 30-1-4 | EN 30-2-1 | IEC 60335-1

IEC 60335-2-102 IEC 60730-1

The IEC standards cover the related electrical parts and electrical control systems.

17 Commercial gas cooking appliances

Used in restaurants, hotels, central kitchens and food establishments, including:

Open burners and wok burners

Commercial ovens

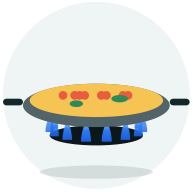

Commercial boiling pans

Commercial fryers

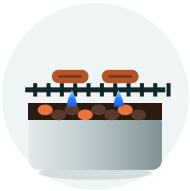

Salamanders and rotisseries

Sausage fryers and paella cookers

Solid tops, hot plates and griddles (saj)

Gas-fired charcoal grills

Pasta cookers

Reference standards for this category include

GSO EN 203-1 EN 203-2-1 GSO EN 203-2-2 EN 203-2-3 EN 203-2-4 GSO EN 203-2-7 EN 203-2-8 EN 203-2-9 GSO EN 203-2-10 EN 203-2-11

Outdoor and portable appliances

Outdoor LPG barbecues

EN 498

Multi-purpose outdoor boiling burners

GSO EN 497

Portable appliances operating at vapour pressure

GSO EN 521

Stand-alone outdoor cookers

SASO EN 484

Appliances incorporating gas cylinders in their housing

EN 17476

⚠ **Note:** Some commercial appliances may also be subject to other regulatory requirements depending on where they are used and the type of establishment; check the scope of the regulation before buying.

18 Heating appliances

Portable domestic radiant gas heaters

Heaters for domestic use that produce heat by thermal radiation.

GSO 169

Radiant heaters for outdoor or well-ventilated areas

Heat outdoor spaces or areas with adequate ventilation, according to the manufacturer’s requirements.

EN 14543

19 Gas water heaters

Instantaneous gas water heaters

Heat water as it flows through the appliance, with no need to store large amounts of hot water.

GSO EN 26

Storage gas water heaters

Heat water and store it in a dedicated tank so hot water is available when needed.

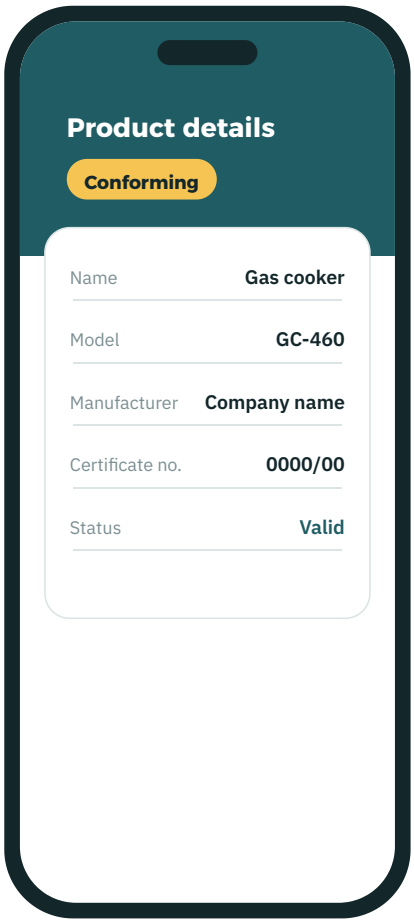

GSO EN 89

05

Chapter five · Question 20

How do I read a QR code with my phone?

An electronic code you scan with your smartphone camera or a dedicated app to reach information about the product, its certificate of conformity and the traceability system. Tap each step:

1. **Open the camera**
   Your phone camera, or a dedicated app that reads QR.
2. **Point the camera at the code**
   On the certificate of conformity, the product or the packaging, depending on the traceability system in force.
3. **Wait for the link**
   A notification or web link will appear.
4. **Tap the link**
   To open the information linked to the code.
5. **Check the details**
   Name, model, manufacturer, certificate number and conformity status, as available.
6. **Compare**
   The information shown with the details of the product you want to buy.

Important for consumers in Oman

Gulf and national traceability requirements differ. Choose a code:

GCTS

Name

Gulf Conformity Tracking code

Linked to

Gulf Conformity Mark and QR code.

Where to find it

Required by the Gulf system on the certificate of conformity and on the product and/or packaging.

OCTS

Name

Omani Conformity Tracking code

Linked to

Omani Conformity Mark and QR code.

Where to find it

Mandatory on the Omani certificate of conformity, not on the product or packaging, as set out in the regulation.

The absence of an Omani traceability code on the product or its packaging is not proof of non-conformity if the product is subject to the Omani conformity assessment procedure.

21 What if the code doesn’t work or shows mismatching information?

- Don’t assume a product conforms just because it carries a QR.
- Ask the seller for a copy of the certificate of conformity.
- Check that the model number and label details match the certificate.
- Don’t rely on unknown links or unofficial pages.
- Contact the competent authority if the details cannot be verified.

06

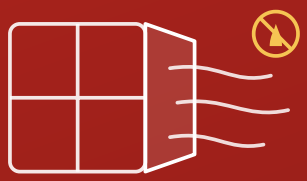

Chapter six · Questions 22 to 28

Safety and safe use

From the flame supervision device inside the appliance to the cylinder, regulator and hose, installation, what to do in a leak, maintenance and your rights.

Important safety advice · Question 26

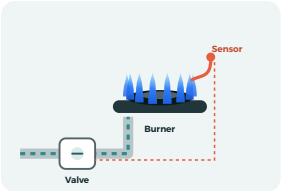

What should I do if I suspect a gas leak?

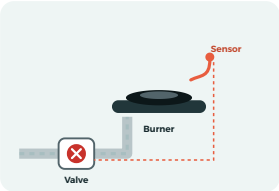

Treat a gas leak seriously: gas building up in enclosed spaces can cause a fire or an explosion.

1. **Do not light** matches, lighters or any other source of flame.
2. **Do not switch on or off** electrical switches or electronic devices inside the area.
3. **Shut off the gas supply** if you can do so safely.
4. **Open doors and windows** for ventilation if you can do so without putting yourself at risk.
5. **Leave the area** and move away from the source of the leak.
6. **Call the competent authorities** or emergency services from a safe place.
7. **Do not go back** until the danger is over and the competent authorities allow it.

22 Why do flame supervision devices (FSD) matter?

Flame on: gas flowing

Flame out: gas shut off automatically

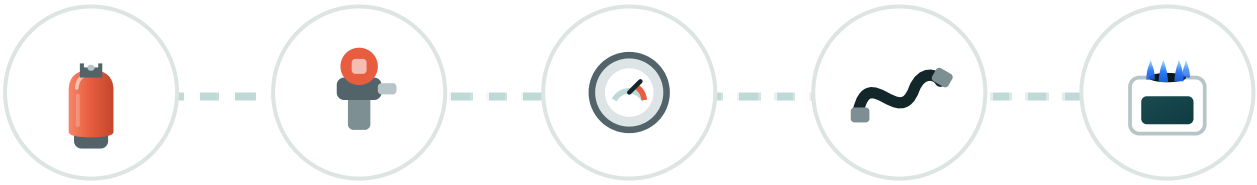

Safety devices that check the flame stays lit in gas appliances and shut off the gas flow when it goes out, helping to prevent gas from leaking and building up.

They are a mandatory safety requirement for the domestic and commercial appliances covered, and must be tested to confirm they shut off the gas supply when the flame goes out.

- Make sure the appliance has a flame supervision system as required.
- Never tamper with or disable safety devices.
- The safety system must be part of the appliance design, not an unapproved add-on.
- Have maintenance and checks done by a qualified technician.

24 How do I choose the right gas regulator and hose?

The regulator and hose are key parts of the gas supply system. Tap any component along the gas path:

Gas cylinder: Container for filling and storing LPG under pressure. Buy it from a licensed outlet and check its body, markings and periodic inspection.

Cylinder valve: Opens and closes the cylinder's gas outlet. Make sure it is sound, with no damage or corrosion at the connection.

Gas regulator: Controls the pressure and flow of gas from the cylinder to the appliance. Choose a regulator that matches the gas type and the appliance's operating pressure.

Hose: Carries gas from the supply to the appliance. Use a hose intended for LPG, free of cracks, with tight connections.

Appliance: A cooker, heater or water heater. Make sure it matches the gas type and supply pressure and has safety features such as flame supervision.

23 Precautions when buying a gas cylinder

- Buy from licensed suppliers and outlets.
- Check that the valve is sound, with no damage or corrosion at the connection.
- Make sure the cylinder is intended for the gas type and use required.
- Never try to repair the cylinder or its valve yourself.
- Check the cylinder body for cracks, bulges or visible damage.
- Check that the required label data and markings are present.
- Never use a cylinder of unknown origin or unknown condition.
- Make sure the required periodic inspections have been carried out under the applicable rules and standards.

24 Choosing the regulator and hose

- Choose a regulator that matches the gas type and the operating pressure the appliance needs.
- Check the hose for cracks, damage or bulges.
- Never use hoses or regulators of unknown origin.
- Use hoses intended for LPG.
- Make sure the connections are suitable and tight.
- Replace damaged parts according to the manufacturer’s instructions, by a qualified technician.

25 Precautions when installing gas appliances

Installation must follow the manufacturer's instructions and the approved technical requirements, taking the following into account:

- Use a qualified installer.
- Provide adequate ventilation as the appliance requires.
- Check that all connections and joints are sound.
- Make sure the flue system for combustion products is sound, if the appliance needs one.
- Make sure the location suits the appliance.
- Make sure the gas type and supply pressure match the appliance.
- Check for gas leaks after installation with a suitable test method.
- Never modify the appliance or its parts against the manufacturer's instructions.

27 Why regular maintenance matters

Regular maintenance keeps appliances safe and efficient and reduces the risk of faults and gas leaks. Consumers should:

- Follow the maintenance schedule set by the manufacturer.
- Stop using appliances that show signs of damage or faults.
- Keep ventilation openings clear and never block them.
- Keep the user manual, certificate of conformity, warranty and maintenance records.
- Have periodic checks done by a qualified technician.
- Check that burners are sound and the flame is stable.
- Never disable or bypass safety devices.

28 What are my rights if I find a non-conforming product?

1

Stop using it
if the product is dangerous.

2

Keep the documents
The purchase invoice, warranty and product documents.

3

Record the product details
Model, serial number and the manufacturer’s or importer’s name.

4

Inform the seller or supplier
of the problem.

5

File a report
with the consumer protection authorities or the relevant market surveillance bodies.

6

Cooperate with the authorities
and provide the information and documents that help verify the complaint.

Don’t hesitate to report products you suspect do not conform; reporting protects consumers and limits the circulation of unsafe products.

07

Putting it into practice

Before you pay: a quick checklist

Use it in the shop; tap each item you have checked.

Print this page and tick each item you check in the shop.

- [ ] The appliance suits your gas type and operating pressure
- [ ] There is a valid certificate of conformity for the same model
- [ ] The certificate was issued by a notified conformity assessment body
- [ ] The Gulf Conformity Mark and traceability code are present where required
- [ ] The product label is clear, legible and in Arabic
- [ ] Manufacturer and importer details and contacts are clear
- [ ] Operating, installation and maintenance instructions are available in Arabic
- [ ] The appliance has safety features, including flame supervision where required
- [ ] Warranty, after-sales service and spare parts are available
- [ ] Bought from a licensed, trusted outlet

Found a product without a certificate of conformity or with missing details?

Report the shop to the inspection team on WhatsApp in a minute; the missing items are added to the report automatically.

WhatsApp: 968 12345678

Worked example: before buying a domestic gas cooker

An illustrative example that applies the steps of this guide to one product from start to finish.

1

Define your needs

Installation spot and its ventilation, and your gas type and regulator pressure.

2

Read the label

Model, manufacturer, importer, gas type and operating pressure.

3

Ask for the certificate

and make sure its model number matches the one on the cooker.

4

Scan the traceability code

where present, and compare the details.

5

Safety features

including flame supervision, as the appliance requires.

6

Qualified installation

and a leak check after installation.

7

Keep your documents

Invoice, warranty, certificate and manual.

Your safety starts with the right choice

Choosing gas appliances and their accessories is directly linked to the safety of consumers, their families and their property. The Directorate General for Standards and Metrology stresses the importance of consumers cooperating with the market surveillance authorities, buying from trusted sources and promptly reporting non-conforming products. An informed consumer is a key partner in raising product quality and keeping markets safe.

- Buy conforming products from a trusted source.
- Check the certificate of conformity and the product label.
- Make sure the appliance suits your gas type and operating pressure.
- Use the appliance according to the manufacturer’s instructions.
- Never ignore or tamper with safety devices.
- Keep up with regular maintenance.
